**8-1 • DAVID BATTLING GOLIATH**
One of the "David Plates," made in Constantinople. 629–630 CE. Silver, diameter 19⅞" (49.4 cm). Metropolitan Museum of Art, New York.

# Byzantine Art

The robust figures on this huge silver plate (**FIG. 8–1**) enact three signature episodes in the youthful hero David's combat with the Philistine giant Goliath (1 Samuel 17:41–51). In the upper register, David—easily identified not only by his youth but also by the prominent halo as the "good guy" in all three scenes—and Goliath challenge each other on either side of a seated Classical personification of the stream that will be the source of the stones David is about to use in the ensuing battle. The confrontation itself appears in the middle, in a broad figural frieze whose size signals its primary importance. Goliath is most notable here for his superior armaments—helmet, spear, sword, and an enormous protective shield. At the bottom, David, stones and slingshot flung behind him, consummates his victory by severing the head of his defeated foe, whose imposing weapons and armor are scattered use-lessly behind him.

Some may be surprised to see a Judeo-Christian subject portrayed in a style that was developed for the exploits of Classical heroes, but this mixture of traditions is typical of the eclecticism characterizing the visual arts as the Christian-ized Roman world became the Byzantine Empire. Patrons saw no conflict between the artistic principles of the pagan past and the Christian teaching undergirding their imperial present. To them, this Jewish subject, created for a Christian patron in a pagan style, would have attracted notice only because of its sumptuousness and its artistic virtuosity.

This was one of nine "David Plates" unearthed in Cyprus in 1902. Control stamps—guaranteeing the purity of the material, much like the stamps of "sterling" that appear on silver today—date them to the reign of the Byzantine emperor Heraclius (r. 613–641 CE). Displayed in the home of their owners, they were visual proclamations of wealth, but also of education and refined taste, just like collections of art and antiques in homes today. A constellation of iconographic and historical factors, however, allows us to uncover a subtler message. For the original owners, the single combat of David and Goliath might have recalled a situation involving their own emperor and enemies.

The reign of Heraclius was marked by war with the Sasanian Persians. A decisive moment in the final campaign of 628–629 CE occurred when Heraclius himself stepped for-ward for single combat with the Persian general Razatis, and the emperor prevailed, presaging Byzantine victory. Some contemporaries referred to Heraclius as a new David. Is it possible that the set of David Plates was produced for the emperor to offer as a diplomatic gift to one of his aristo-cratic allies, who subsequently took them to Cyprus? Perhaps the owners later buried them for safekeeping—like the early silver platter from Mildenhall (see **FIG. 6–68**)—where they awaited discovery at the beginning of the twentieth century.

## LEARN ABOUT IT

**8.1** Survey the variety of stylistic sources and developments that characterize the long history of Byzantine art.

**8.2** Understand the principal themes and subjects—secular as well as sacred—used by Byzantine artists.

**8.3** Assess the central role of images in the devotional practices of the Byzantine world and explore the reasons for and impact of the brief interlude of iconoclasm.

**8.4** Trace the growing Byzantine interest in conveying human emotions and representing human situations when visualizing sacred stories.

**MAP 8–1 • THE LATE ROMAN AND BYZANTINE WORLD**

The eastern shores of the Mediterranean, birthplace of Judaism and Christianity, were the focal point of the Byzantine Empire. The empire expanded further west under Emperor Justinian, though by 1025 CE it had contracted again to the east.

# BYZANTIUM

Art historians apply the term "Byzantine" broadly to the art and architecture of Constantinople—whose ancient name, before Constantine renamed the revitalized city after himself, was Byzantium—and of the regions under its influence. Constantine had chosen well in selecting the site of his new capital city—his "New Rome." Constantinople lay at the crossroads of the overland trade routes between Asia and Europe and the sea route connecting the Black Sea and the Mediterranean. Even as the territories controlled by Byzantine rulers diminished in size and significance from century to century leading up to the fall of Constantinople in 1453, Byzantine emperors continued to conceive themselves as successors to the rulers of ancient Rome, their domain as an extension of the Roman Empire, and their capital city as an enduring manifestation of the glory that was ancient Rome.

In this chapter, we will focus on what has been considered the three "golden ages" of Byzantine art. The Early Byzantine period, most closely associated with the reign of Emperor Justinian I (r. 527–565), began in the fifth century and ended in 726, at the onset of the iconoclast controversy that led to the destruction of religious images. The Middle Byzantine period began in 843, when Empress Theodora (c. 810–867) reinstated the veneration of icons, and continued until 1204, when Christian crusaders from western Europe occupied Constantinople. The Late Byzantine period began with the restoration of Byzantine rule in 1261 and ended with the empire's fall to the Ottoman Turks in 1453, at which point Russia succeeded Constantinople as the "Third Rome" and the center of the Eastern Orthodox Church. Late Byzantine art continued to flourish into the eighteenth century in Ukraine, Russia, and much of southeastern Europe.

# EARLY BYZANTINE ART

## THE GOLDEN AGE OF JUSTINIAN

During the fifth and sixth centuries, while invasions and religious controversy racked the Italian peninsula, the Eastern Roman Empire prospered. In fact, during the sixth century under Emperor Justinian I and his wife, Empress Theodora (d. 548), Byzantine political power, wealth, and culture were at their peak. Imperial forces held northern Africa, Sicily, much of Italy, and part of Spain. Ravenna became the Eastern Empire's administrative capital in the west, and Rome remained under nominal Byzantine control until the eighth century.

**HAGIA SOPHIA IN CONSTANTINOPLE** In Constantinople, Justinian and Theodora embarked on a spectacular campaign of building and renovation, but little now remains of their architectural projects or of the old imperial capital itself. The church of Hagia Sophia, meaning "Holy Wisdom" (referring to the dedication of this church to Christ as the embodiment of divine wisdom) is a spectacular exception (**FIG. 8–2**). It replaced a fourth-century church destroyed when crowds, spurred on by Justinian's foes during the devastating urban Nika Revolt in 532, set the old church on fire and cornered the emperor within his palace. Theodora,

a brilliant and politically shrewd woman, is said to have shamed Justinian, who was plotting to escape, into not fleeing the city, saying "Purple makes a fine shroud"—a reference to purple as the imperial color. Theodora meant that she would rather remain and die an empress than flee and preserve her life. Taking up her words as a battle cry, Justinian led the imperial forces in crushing the rebels and restoring order, reputedly slaughtering 30,000 of his subjects in the process.

To design a new church that embodied imperial power and Christian glory, Justinian chose two scholar-theoreticians, Anthemius of Tralles and Isidorus of Miletus. Anthemius was a specialist in geometry and optics, and Isidorus a specialist in physics who had also studied vaulting. They developed an audacious and awe-inspiring design, executed by builders who had refined their masonry techniques by building the towers and domed rooms that were part of the city's defenses. So when Justinian ordered the construction of domed churches, and especially Hagia Sophia, master masons with a trained and experienced workforce stood ready to give permanent form to his architects' dreams.
The new Hagia Sophia was not constructed by the miraculous intervention of angels, as was rumored, but by mortal builders in only five years (532–537). Procopius of Caesarea, who chronicled Justinian's reign, claimed poetically that Hagia Sophia's gigantic

dome seemed to hang suspended on a "golden chain from heaven." Legend has it that Justinian himself, aware that architecture can be a potent symbol of earthly power, compared his accomplishment with that of the legendary builder of the First Temple in Jerusalem, saying "Solomon, I have outdone you."

Hagia Sophia is an innovative hybrid of longitudinal and central architectural planning (**FIG. 8–3**). The building is clearly dominated by the hovering form of its gigantic dome (**FIG. 8–4**). But flanking **conches**—halfdomes—extend the central space into a longitudinal nave that expands outward from the central dome to connect with the narthex on one end and the halfdome of the sanctuary apse on the other. This processional core, called the **naos** in Byzantine architecture, is flanked by side aisles and **galleries** above them overlooking the naos.

Since its idiosyncratic mixture of basilica and rotunda precludes a ring of masonry underneath the dome to provide support around its circumference (as in the Pantheon, see FIGS. 6–50, 6–51), the main dome of Hagia Sophia rests instead on four **pendentives** (triangular curving vault sections) that connect the base of the dome with the huge supporting piers at the four corners of the square area beneath it (see "Pendentives and Squinches," page 238). And since these piers are essentially submerged back into the darkness of the aisles, rather than expressed within the main space itself (see FIG. 8–3), the dome seems to float mysteriously over a void. The miraculous, weightless effect was reinforced by the light-reflecting gold mosaic that covered the surfaces of dome and pendentives alike, as well as by the band of 40 windows that perforate the base of the dome right where it meets its support. This daring move challenges architectural logic by seeming to weaken the integrity of the masonry at the very place where it needs to be strong, but the windows created the circle of light that helps the dome appear to hover, and a reinforcement of buttressing on the exterior made the solution sound as well as shimmering. The origin of the dome on pendentives is obscure, but its large-scale use at Hagia Sophia was totally unprecedented and represents one

of the boldest experiments in the history of architecture. It was to become the preferred method of supporting domes in Byzantine architecture.

The architects and builders of Hagia Sophia clearly stretched building materials to their physical limits, denying the physicality of the building in order to emphasize its spirituality. In fact, when the first dome fell in 558, it did so because a pier and pendentive shifted and because the dome was too shallow and exerted too much outward force at its base, not because the windows weakened the support. Confident of their revised technical methods, the architects designed a steeper dome that raised the summit 20 feet higher. They also added exterior buttressing. Although repairs had to be made in 869, 989, and 1346, the church has since withstood numerous earthquakes.

The liturgy used in Hagia Sophia in the sixth century has been lost, but it presumably resembled the rites described in detail for the church in the Middle Byzantine period. The celebration of the Eucharist took place behind a screen that separated the sanctuary from the nave. The emperor was the only layperson permitted to enter the sanctuary. Other men and women stood in the aisles or in the galleries, where they witnessed the processions of clergy, moving in a circular path from the sanctuary into the nave and back five or six times during the ritual.

Hagia Sophia was thus a gigantic theater for public, imperial worship of God—whose presence was assumed within the building—created by a culture within which Church and state were inextricably intertwined. Justinian had the sanctuary embellished with 40,000 pounds of silver that he donated himself. This precious material was crafted into sumptuous decorations on the altar, a ciborium (canopy sheltering the altar), ambo (pulpit), and screen. Since there was no figural decoration on the walls of the building in Justinian's time to focus the attention of viewers in any one place, worshipers standing on the church floor must have surveyed the whole expanse of the interior, shifting their attention from one shimmering vista to the next.
**8–4 • INTERIOR OF THE CHURCH OF HAGIA SOPHIA**

**Read** the document related to the church of Hagia Sophia on myartslab.com
Pendentives and squinches are two methods of supporting a round dome or its drum over a square space. Pendentives are concave, triangular forms between the arches under a dome. They rise upward and inward to form a circular base of support on which the dome rests. **Squinches** are diagonal lintels placed across the upper corner of the wall and supported by an arch or a series of corbeled arches that give it a nichelike shape. Because squinches create an octagon, which is close in shape to a circle, they provide a solid base around the perimeter of a dome, usually elevated on a drum (a circular wall), whereas pendentives project the dome slightly inside the square space it covers, making it seem to float. Byzantine builders preferred pendentives (as at Hagia Sophia, see FIG. 8–4), but elaborate, squinch-supported domes became a hallmark of Islamic architecture.

**SAN VITALE IN RAVENNA** In 540, Byzantine forces captured Ravenna from the Arian Christian Ostrogoths who had themselves taken it from the Romans in 476. Much of our knowledge of the art of this turbulent period comes from the well-preserved monuments at Ravenna. In 526, Ecclesius, bishop of Ravenna, commissioned two new churches, one for the city and one for its port, Classis. In the 520s, construction began on a central-plan church, a **martyrium** (church built over the grave of a martyr) dedicated to the fourth-century Roman martyr St. Vitalis (Vitale in Italian), but it was not finished until after Justinian had

**8–5 • PLAN (A) AND CUTAWAY DRAWING (B) OF THE CHURCH OF SAN VITALE, RAVENNA**
Under construction from c. 520; consecrated 547.

Christian churches are identified by a three-part descriptive title combining (1) designation (or type), with (2) dedication (often to a saint), and finally (3) geographic location, cited in that order.

**Designation:** There are various types of churches, fulfilling a variety of liturgical and administrative objectives, and the identification of a specific church often begins with an indication of its function within the system. For example, an **abbey church** or monastery church is the place of worship within a monastery or convent; a **pilgrimage church** is a site that attracts visitors wishing to venerate **relics** (material remains or objects associated with a saint) as well as attend services. A cathedral is a bishop's primary church (the word derives from the Latin *cathedra*, meaning chair, since the chair or throne of a bishop is contained within his cathedral). A bishop's domain is called a diocese, and there can be only one church in the diocese designated as its bishop's cathedral, but a diocese has numerous parish churches where local residents attend regular services.

**Dedication:** Christian churches are always dedicated to Christ, the Virgin Mary, a saint, or a sacred concept or event, for example St. Peter's Basilica or the church of Hagia Sophia (Christ as the embodiment of Holy Wisdom). In short-hand identification, when we omit the church designation at the beginning, we always add an apostrophe and an *s* to a saint's name, as when using "St. Peter's" to refer to the Vatican Basilica of St. Peter in Rome.

**Location:** The final piece of information that clearly pinpoints the specific church indicated in a title is its geographic location, as in the church of San Vitale in Ravenna or the Cathedral of Notre-Dame (French for "Our Lady," referring to the Virgin Mary) in Paris. "Notre-Dame" alone usually refers to this Parisian cathedral, in spite of the fact that many contemporary cathedrals elsewhere (e.g. at Chartres and Reims) were also dedicated to "Notre-Dame." Similarly, "St. Peter's" usually means the Vatican church of the pope in Rome.

conquered Ravenna and established it as the administrative capital of Byzantine Italy (**FIG. 8–5**).

San Vitale was designed as a central-domed octagon surrounded by eight radiating exedrae (wall niches), surrounded in turn by an ambulatory and gallery, all covered by vaults. A rectangular sanctuary and semicircular apse project from one of the sides of the octagon, and circular rooms flank the apse. A separate oval narthex, set off-axis, joined church and palace and also led to cylindrical stair towers that gave access to the second-floor gallery.
The floor plan of San Vitale only hints at the effect of the complex, interpenetrating interior spaces of the church, an effect that was enhanced by the offset narthex, with its double sets of doors leading into the church. People entering from the right saw only arched openings, whereas those entering from the left approached on an axis with the sanctuary, which they saw straight ahead of them. The dome rests on eight large piers that frame the exedrae and the sanctuary. The undulating, two-story exedrae open through superimposed arcades into the outer aisles on the ground floor and into galleries on the second floor. They push out the circular central space and create an airy, floating sensation, reinforced by the liberal use of veined marble veneer and colored glass and gold mosaics in the surface decoration. As in Hagia Sophia, structure seems to dissolve into shimmering light and color, only here an elaborate program of figural mosaics focuses the worshiper's attention within the sanctuary (**FIG. 8–6**).

In the halfdome of the sanctuary apse (**FIG. 8–7**), St. Vitalis and Bishop Ecclesius flank an image of Christ enthroned. The other sanctuary images relate to its use for the celebration of the Eucharist. The lunette on the north wall shows an altar table set for the meal that Abraham offers to three disguised angels (Genesis 18:1–15), and next to it a portrayal of his near-sacrifice of Isaac. In the spandrels and other framed wall spaces appear prophets and evangelists, and the program is bristling with symbolic references to Jesus, but the focus of the sanctuary program is the courtly tableau in the halfdome of the apse.

A youthful, classicizing Christ appears on axis, dressed in imperial purple and enthroned on a cosmic orb in paradise, the setting indicated by the four rivers that flow from the ground underneath him. Two winged angels flank him, like imperial bodyguards or attendants. In his left hand Christ holds a scroll with seven seals that he will open at his Second Coming at the end of time, proclaiming his authority not only over this age, but over the age to come. He extends his right hand to offer a crown of martyrdom to a figure on his right (our left) labeled as St. Vitalis, the saint to whom this church is dedicated. On the other side is the only un-nimbed figure in the tableau, labeled as Bishop Ecclesius, the founder of San Vitale, who holds forward a model of the church itself, offering it to Christ. The artist has imagined a scene of courtly protocol in paradise, where Christ, as emperor, gives a gift to, and receives a gift from, members of the celestial entourage.

In separate, flanking rectangular compositions, along the curving wall of the apse underneath the scene in the halfdome appear Justinian and Theodora and their retinues (Justinian can be seen in **FIG. 8–6**). The royal couple did not attend the dedication ceremonies for the church of San Vitale, conducted by Archbishop Maximianus in 547. There is no evidence that they actually set foot in Ravenna, but these two large mosaic panels that face each other across its sanctuary picture their presence here in perpetuity.

Church of San Vitale, Ravenna. c. 547. Mosaic.

**8–8 • EMPEROR JUSTINIAN AND HIS ATTENDANTS, NORTH WALL OF THE APSE**
Church of San Vitale, Ravenna. Consecrated 547.
Mosaic, 8′8″ × 12′ (2.64 × 3.65 m).

As head of state, the haloed Justinian wears a huge jeweled crown and a purple cloak; he carries a large golden paten that he is donating to San Vitale for the celebration of the Eucharist. Bishop Maximianus at his left holds a jeweled cross and another churchman holds a jewel-covered book. Government officials stand at Justinian's right, followed by barbarian mercenary soldiers, one of whom wears a neck torc, another a Classical cameo cloak clasp.

**8–9 • EMPRESS THEODORA AND HER ATTENDANTS, SOUTH WALL OF THE APSE**
Church of San Vitale, Ravenna. c. 547.
Mosaic 8′8″ × 12′ (2.64 × 3.65 m).

Like Justinian, Theodora has a halo, wears imperial purple, and carries in her hands a liturgical vessel—the chalice that held the Eucharistic wine—that she will donate to the church. Her elaborate jewelry includes a wide collar of embroidered and jeweled cloth. A crown, hung with long strands of pearls (thought to protect the wearer from disease), frames her face. Her attendants also wear the rich textiles and jewelry of the Byzantine court.

Justinian (**FIG. 8-8**), on the north wall, carries a large golden paten that will be used to hold the Eucharistic bread and stands next to Maximianus, who holds a golden, jewel-encrusted cross. The priestly celebrants at the right carry the Gospels, encased in a golden, jeweled book cover, symbolizing the coming of Christ as the Word, and a censer containing burning incense to purify the altar prior to the Eucharist.

On the south wall, Theodora, standing beneath a fluted shell canopy and singled out by a golden halo and elaborate crown, carries a huge golden chalice studded with jewels (**FIG. 8-9**). The rulers present these gifts as precious offerings to Christ—emulating most immediately Bishop Ecclesius, who offers a model of the church to Christ in the halfdome of the apse, but also the three Magi who brought valuable gifts to the infant Jesus, depicted in "embroidery" at the bottom of Theodora's purple cloak. In fact, the paten and chalice offered by the royal couple will be used by this church to offer Eucharistic bread and wine to the local Christian community during the liturgy. In this way the entire program of mosaic decoration revolves around themes of offering, extended into the theme of the Eucharist itself.

Theodora's group stands beside a fountain, presumably in a courtyard leading to the entrance to the church. The open doorway and curtain are Classical space-creating devices, but here the mosaicists have deliberately avoided allowing their illusionistic power to overwhelm their ability also to create flat surface patterns. Notice, too, that the figures cast no shadows, and, though modeled, their outlines as silhouetted shapes are more prominent than their sense of three-dimensionality. Still, especially in Justinian's panel, a complex and carefully controlled system of overlapping allows us to see these figures clearly and logically situated within a shallow space, moving in a stately procession from left to right toward the entrance to the church and the beginning of the liturgy. So the scenes portrayed in these mosaic paintings are both flattened and three-dimensional, abstract and representational, patterned and individualized. Like Justinian and Theodora, their images are both there and not there at the same time.

**THE MONASTERY OF ST. CATHERINE ON MOUNT SINAI** Justinian's imperial architectural projects extended across the breadth of the Byzantine Empire, emulating the example of the great emperors of ancient Rome. Soon after the dedication of San Vitale, he sponsored the reconstruction of the monastery of St. Catherine at Mount Sinai in Egypt (**FIG. 8-10**). This pilgrimage destination and spiritual retreat had been founded much earlier, during the fourth century, at the place where Moses had encountered God in the burning bush (Exodus 4 and 5) and in the shadow of the peak on which he had met God to receive the Ten Commandments (Exodus 19 and 20). Justinian's reconstruction focused on two aspects of the complex. In conjunction with the installation of a frontier garrison to protect both monks and pilgrims from Bedouin attacks on this remote border outpost, Justinian had the walls of the monastery fortified. He also commissioned

a new church, dedicated to the Virgin Mary and—according to inscriptions carved into the wooden beams that support its roof—built in memory of Theodora, who died in 548.

Procopius' description of this project focuses on characterizing the lives of the monks who lived there:

> On this Mount Sinai whose life is a kind of careful rehearsal of death, and they enjoy without fear the solitude which is very precious to them. Since these monks have nothing to desire, for they are superior to all human wishes and they have no interest in owning anything or in caring for their bodies, nor do they seek pleasure in any other thing whatever, therefore the emperor Justinian built them a church which he dedicated to the Mother of God, so that they might be enabled to pass their lives within it, praying and holding services. (*Buildings*, V, viii, translated by H.B. Dewing, Loeb Library ed.)

The origins of monasticism in the eastern Christian world can be traced back to the third century, when some devout Christians began to retire into the desert to become hermits, living a secluded life of physical austerity and devoted to continual meditation and prayer. By the fourth century, groups of men and women began assembling around these hermits, ultimately forming independent secluded communities devoted to prayer and work. These monks and nuns practiced celibacy, poverty, and obedience to a spiritual leader, and they aspired to self-sufficiency so as to minimize contact with the outside world. The monastic movement grew rapidly; by 536 there were about 70 monasteries in Constantinople alone. Although they continued to function as retreats from the secular world—places where pious men and women could devote themselves almost exclusively to the contemplative life and safe havens for orphans, the poor, and the elderly—the monasteries, being tax-exempt, also amassed enormous wealth from the donations and bequests of the rich.

A local architect designed the new basilica church that Justinian commissioned for the monks and pilgrims of Mount Sinai. The building was constructed of local materials, but the sumptuous decoration of the sanctuary derives from more cosmopolitan artistic centers. The marble revetment that faces the lower walls of the apse was imported from an island quarry near Constantinople, and the artists who covered the halfdome of the apse and the end wall of the nave above it with powerful scenes in sumptuous mosaics were probably called in from Jerusalem, or even Constantinople. As at San Vitale, mosaic decoration is concentrated in the sanctuary, where the apse would have glistened with vivid color and divine light—a spotlighted destination at the end of the longitudinal axis of the processional nave (**FIG. 8-11**).

The mosaics integrate a series of stories and themes into a coherent program around the notion of theophany—the appearance of God to human beings. Two rectangular scenes on the end wall of the nave, above the apse (only partially visible in **FIG.** 8-11), picture two local theophanies—Moses before the burning bush

**8–10 • THE MONASTERY OF ST. CATHERINE, SINAI**
Mount Sinai, Egypt. Fortifications and church constructed under the patronage of Emperor Justinian, c. 548–566.

Founded in the fourth century, this monastery was initially associated with the burning bush, since it was built on the site where Moses was believed to have encountered this startling theophany, but in the tenth or eleventh century it was rededicated to St. Catherine of Alexandria after acquiring her relics.

**8–11 • THE TRANSFIGURATION OF CHRIST**
Apse mosaic in the church of the Virgin, monastery of St. Catherine, Mount Sinai, Egypt. c. 565.

Framing the scene of the Transfiguration are medallion portraits of the 12 apostles, 2 monastic saints, and the 17 major and minor prophets. Sixth-century viewers would probably have associated David—in the medallion directly under Jesus and dressed in the robes and crown of a Byzantine emperor—with the patron, Emperor Justinian, and an inscription running above the lower row of medallions to the right identifies the monastic leaders at the time the mosaic was made and dates them to 565/6, near the time of Justinian's death.

and Moses receiving the law. The halfdome of the apse highlights the Transfiguration, an episode from the life of Jesus during which he was transformed "on a high mountain" from human to divine and set between apparitions of Moses and Elijah before the eyes of Peter, James, and John, three of his disciples (Matthew 17:1–6). The central figure of Jesus fits the description in the gospel text—"his face shone like the sun, and his clothes became dazzling white." The artists have flattened Jesus' form and set him against a contrasting deep blue mandorla (body halo), through which pass rays of light emanating from him and touching the figures around him. Unlike Jesus, the three apostles below him—who "fell to the ground and were overcome by fear"—are active rather than static, aggressively three-dimensional rather than brilliantly flattened, in a visual contrast between celestial apparition and earthly form. The entire tableau takes place against a background of golden light, with no indication of a landscape setting other than the banded lines of color at the bottom of the scene.

## OBJECTS OF VENERATION AND DEVOTION

The court workshops of Constantinople excelled in the production of luxurious small-scale works in gold, ivory, and textiles. The Byzantine elite also sponsored vital **scriptoria** (writing centers for scribes—professional document writers) for the production of **manuscripts** (handwritten books), often located within monasteries.

**THE ARCHANGEL MICHAEL DIPTYCH** Commemorative ivory diptychs—two carved panels hinged together—originated with ancient Roman politicians elected to the post of consul. New consuls would send notices of their election to friends and colleagues by inscribing them in wax that filled a recessed rectangular area on the inner sides of a pair of ivory panels carved with elaborate decoration on the reverse. Christians adapted the practice for religious use, inscribing a diptych with the names of people to be remembered with prayers during the liturgy.

This large panel depicting the **ARCHANGEL MICHAEL**—the largest surviving Byzantine ivory—was half of such a diptych (**FIG. 8-12**). In his classicizing serenity, imposing physical presence, and elegant architectural setting, the archangel is comparable to the (supposed) priestess of Bacchus in the fourth-century pagan Symmachus diptych panel (see FIG. 6–70) and reminiscent of the standing saints in the dome mosaics of St. George in Thessaloniki (see FIG. 7–21). His relationship to the architectural space and the frame around him, however, is more complex. His heels rest on the top step of a stair that clearly lies behind the columns and pedestals, but the rest of his body projects in front of them—since it overlaps the architectural setting—creating a striking tension between this celestial figure and his terrestrial backdrop.

The angel is outfitted here as a divine messenger, holding a staff of authority in his left hand and a sphere symbolizing worldly power in his right. Within the arch is a similar cross-topped orb, framed by a wreath bound by a ribbon with long, rippling extensions,

**8–12 • ARCHANGEL MICHAEL**
Panel of a diptych, probably from the court workshop at Constantinople. Early 6th century. Ivory, 17″ × 5½″ (43.3 × 14 cm). British Museum, London.

Since people began to write some 5,000 years ago, they have kept records on a variety of materials, including clay or wax tablets, pieces of broken pottery, papyrus, animal skins, and paper. Books have taken two forms: scroll and codex.

Scribes made scrolls from sheets of papyrus glued end to end or from thin sheets of cleaned, scraped, and trimmed sheepskin or calfskin, a material known as **parchment** or, when softer and lighter, vellum. Each end of the scroll was attached to a rod; readers slowly unfurled the scroll from one rod to the other as they read. Scrolls could be written to be read either horizontally or vertically.

At the end of the first century CE, the more practical and manageable **codex** (plural, codices)—sheets bound together like the modern book—replaced the scroll as the primary form of recording texts. The basic unit of the codex was the eight-leaf quire, made by folding a large sheet of parchment twice, cutting the edges free, then sewing the sheets together up the center. Heavy covers kept the sheets of a codex flat. The thickness and weight of parchment and vellum made it impractical to produce a very large manuscript, such as an entire Bible, in a single volume. As a result, individual sections were made into separate books.

Until the invention of printing in the fifteenth century, all books were manuscripts—that is, they were written by hand. Manuscripts often included illustrations, called **miniatures** (from *minium*, the Latin word for a reddish lead pigment). Manuscripts decorated with gold and colors were said to be illuminated.

---

that is set against the background of a scallop shell. The lost half of this diptych would have completed the Greek inscription across the top, which reads: "Receive these gifts, and having learned the cause…." Perhaps the other panel contained a portrait of the emperor—many think he would be Justinian—or of another high official who presented the panels as a gift to an important colleague, acquaintance, or family member. Nonetheless, the emphasis here is on the powerfully classicized celestial messenger, who does not need to obey the laws of earthly scale or human perspective.

**THE VIENNA GENESIS** Byzantine manuscripts were often made with very costly materials. For example, sheets of purple-dyed **vellum** (a fine writing surface made from calfskin) and gold and silver inks were used to produce a codex now known as the Vienna Genesis. It was probably made in Syria or Palestine, and the purple vellum indicates that it may have been created for an imperial patron, since costly purple dye, made from the secretions of murex mollusks, was usually restricted to imperial use. The Vienna Genesis is written in Greek and illustrated with pictures that appear below the text at the bottom of the pages.

The story of **REBECCA AT THE WELL** (**FIG. 8–13**) (Genesis 24) appears here in a single composition, but the painter—clinging to the **continuous narrative** tradition that had characterized the illustration of scrolls—combines events that take place at different times in the story within a single narrative space. Rebecca, the heroine, appears at the left walking away from the walled city of Nahor with a large jug on her shoulder, going to fetch water. A colonnaded road leads toward a spring, personified by a reclining pagan water nymph who holds a flowing jar. In the foreground, Rebecca appears again, clearly identifiable by continuity of costume. Her jug now full, she encounters a thirsty camel driver and offers him water to drink. Since he is Abraham's servant, Eliezer, in search of a bride for Abraham's son Isaac, Rebecca's generosity results in her marriage to Isaac. The lifelike poses and rounded, full-bodied figures of this narrative scene conform to the conventions of traditional Roman painting. The sumptuous purple of the background and the glittering metallic letters of the text situate the book within the world of the privileged and powerful in Byzantine society.

**8–13 • REBECCA AT THE WELL**
Page from a codex featuring the book of Genesis (known as the Vienna Genesis). Made in Syria or Palestine. Early 6th century. Tempera, gold, and silver paint on purple-dyed vellum, 13½″ × 9⅞″ (33.7 × 25 cm). Österreichische Nationalbibliothek, Vienna.

**LUXURY WORKS IN SILVER** The imperial court at Constantinople had a monopoly on the production of some luxury goods, especially those made of precious metals. A seventh-century court workshop seems to have been the origin of a spectacular set of nine silver plates portraying events in the early life of the biblical King David, including the plate that we examined at the beginning of the chapter (see FIG. 8–1).

The plates would have been made by hammering a large silver ingot (the plate in FIG. 8–1 weighs 12 pounds 10 ounces) into a round shape and raising on it the rough semblance of the human figures and their environment. With finer chisels, silversmiths then refined these shapes, and at the end of their work, they punched ornamental motifs and incised fine details. The careful modeling, lifelike postures, and intricate engraving document the highly refined artistry and stunning technical virtuosity of these cosmopolitan artists at the imperial court who still practiced a classicizing art that had characterized some works of Christian art for centuries (see FIGS. 7–8, 7–21, 8–12).

## ICONS AND ICONOCLASM

Christians in the Byzantine world prayed to Christ, Mary, and the saints while gazing at images of them on independent panels known as **icons**. Church doctrine toward the veneration of icons was ambivalent. Christianity inherited from Judaism an uneasiness with the power of religious images, rooted in the Mosaic prohibition of "graven images" (Exodus 20:4). The lingering effects of the early persecution of Christians because of their refusal to venerate images of Roman emperors only intensified this anxiety. But key figures of the Eastern Church, such as Basil the Great of Cappadocia (c. 329–379) and John of Damascus (c. 675–749), distinguished between idolatry—the worship of images—and

the veneration of an idea or holy person depicted in a work of art. Icons were thus accepted as aids to meditation and prayer, as intermediaries between worshipers and the holy personages they depicted. Honor showed to the image was believed to transfer directly to its spiritual prototype.

Surviving early icons are rare. A few precious examples exist at the monastery of St. Catherine on Mount Sinai, among them **VIRGIN AND CHILD WITH SAINTS AND ANGELS** (FIG. 8–14). As Theotokos (Greek for "bearer of God"), Jesus' earthly mother was viewed as a powerful, ever-forgiving intercessor, who could be counted on to appeal to her divine son for mercy on behalf of devout

Iconoclasm (literally "image breaking," from the Greek words *eikon* "image" and *klao* meaning "break" or "destroy") is the prohibition and destruction of works of visual art, usually because they are considered inappropriate in religious contexts.

During the eighth century, mounting discomfort with the place of icons in Christian devotion grew into a major controversy in the Byzantine world, and between 726 and 730, Emperor Leo III (r. 717–741) imposed iconoclasm, initiating the systematic destruction of images of saints and sacred stories on icons and in churches, as well as the persecution of those who made them and defended their use. His successor, Constantine V (r. 741–775), enforced these policies and practices with even greater fervor, but at the end of the reign of Leo IV (r. 775–780), his widow, Empress Irene, who ruled as regent for their son Constantine IV (r. 780–797), put an end to iconoclasm in 787 through a church council held in Nicea. Leo V (r. 813–820) instituted a second phase of iconoclasm in 813, and it remained imperial policy until March 11, 843, when the widowed Empress Theodora reversed her husband Theophilus' policy and reinstated the central place of images in Byzantine devotional practice.

A number of explanations have been proposed for these two interludes of Byzantine iconoclasm. Some Church leaders feared that the use of images in worship could lead to idolatry or at least distract worshipers from their spiritual exercises. Specifically, there were questions surrounding the relationship between images and the Eucharist, the latter considered by iconoclasts as sufficient representation of the presence of Christ in the church. But there was also anxiety in Byzantium about the weakening state of the empire, especially in relation to the advances of Arab armies into Byzantine territory. It was easy to pin these hard times on God's displeasure with the idolatrous use of images. Coincidentally, Leo III's success fighting the Arabs could be interpreted as divine sanction of his iconoclastic position, and its very adoption might appease the iconoclastic Islamic enemy itself. Finally, since the production and promotion of icons was centered in monasteries—at that time rivaling the state in strength and wealth—attacking the use of images might check their growing power. Perhaps all these factors played a part, but at the triumph of the **iconophiles** (literally "lovers of images") in 843, the place of images in worship was again secure: Icons proclaimed Christ as God incarnate and facilitated Christian worship by acting as intermediaries between humans and saints. Those who had suppressed icons became heretics (**FIG. 8–15**).

But iconoclasm is not restricted to Byzantine history. It reappears from time to time throughout the history of art. Protestant reformers in sixteenth-century Europe adopted what they saw as the iconoclastic position of the Hebrew Bible (Exodus 20:4), and many works of Catholic art were destroyed by zealous reformers and their followers. Even more recently, in 2001, the Taliban rulers of Afghanistan dynamited two gigantic fifth-century CE statues of the Buddha carved into the rock cliffs of the Bamiyan Valley, specifically because they believed such "idols" violated Islamic law.

**8–15 • CRUCIFIXION AND ICONOCLASTS**
From the Chludov Psalter. Mid 9th century. Tempera on vellum, 7¾″ × 6″ (19.5 × 15 cm). State Historical Museum, Moscow. MS. D. 29, fol. 67v

This page and its illustration of Psalm 69:21—made soon after the end of the iconoclastic controversy in 843—records the iconophiles' harsh judgment of the iconoclasts. Painted in the margin at the right, a scene of the Crucifixion shows a soldier tormenting Christ with a vinegar-soaked sponge. In a striking visual parallel, two named iconoclasts—identified by inscription—in the adjacent picture along the bottom margin employ a whitewash-soaked sponge to obliterate an icon portrait of Christ, thus linking them by their actions with those who had crucified him.

and repentant worshipers. The Virgin and Child are flanked here by Christian warrior-saints Theodore (left) and George (right)—both legendary figures said to have slain dragons, representing the triumph of the Church over the "evil serpent" of paganism. Angels behind them twist their heads to look heavenward. The artist has painted the Christ Child, the Virgin, and especially the angels, with an illusionism that renders them lifelike and three-dimensional in appearance. But the warrior-saints—who look out to meet directly the worshipful gaze of viewers—are more stylized. Here the artist barely hints at bodily form beneath the richly patterned textiles

of their cloaks, and their tense faces are frozen in frontal stares of gripping intensity.

In the eighth century, the veneration of icons sparked a major controversy in the Eastern Church, and in 726 Emperor Leo III launched a campaign of **iconoclasm** ("image breaking"), banning the use of icons in Christian worship and ordering the destruction of devotional pictures (see "Iconoclasm," page 247). Only a few early icons survived in isolated places like Mount Sinai, which was no longer a part of the Byzantine Empire at this time. But iconoclasm did not last. In 787 iconoclasm was revoked at the instigation of Empress Irene, only to be reinstated in 813. Again it was an empress—Theodora, widow of Theophilus, last of the iconoclastic emperors—who reversed her husband's policy in 843, and from this moment onward icons would play an increasingly important role as the history of Byzantine art developed.

# MIDDLE BYZANTINE ART

With the turmoil and destruction of iconoclasm behind them, Byzantine patrons and artists turned during the second half of the ninth century to ambitious projects of restoration and renewal, redecorating church interiors with figural images and producing new icons in a variety of media for the devotional practices of the faithful. This period also saw a renewal and expansion of the power and presence of monasteries in the Byzantine world. A new Macedonian dynasty of rulers—founded in 866 by Emperor Basil I (r. 866–886) and continuing until 1056—increased Byzantine military might, leading to an expansion of imperial territory, only checked in the mid eleventh century by the growing power of the Turks who dealt the Byzantine army a series of military setbacks that would continue to erode the empire until the fifteenth century. But after the empire stabilized under the Komnenian dynasty (1081–1185), it was not the Turks who instigated the end of the Middle Byzantine period. It ended abruptly when Christian crusaders from the west, setting out on a holy war against Islam, diverted their efforts to conquering the wealthy Christian Byzantine Empire, taking Constantinople in 1204. The crusaders looted the capital and set up a Latin dynasty of rulers to replace the Byzantine emperors, who fled into exile.

The patronage of the Macedonian dynasty stimulated a new golden age of Byzantine art, often referred to as the "Macedonian Renaissance," since it was marked by an intensified interest in the styles and themes of classical art, as well as by a general revitalization of intellectual life, including the study and emulation of the classics. As the Middle Byzantine period developed, the geography of Byzantine art changed significantly. As we have seen, early Byzantine civilization had been centered in lands along the rim of the Mediterranean Sea that had been within the Roman Empire. During the Middle Byzantine period, Constantinople's scope was reduced to present-day Turkey and other areas by the Black Sea, as well as the Balkan peninsula, including Greece, and southern Italy. The influence of Byzantine culture also extended into Russia and Ukraine, and to Venice, Constantinople's trading partner in north-eastern Italy, at the head of the Adriatic Sea.

## ARCHITECTURE AND WALL PAINTING IN MOSAIC AND FRESCO

Although the restitution of images within Byzantine religious life led to the creation of new mosaics in the major churches of the capital, comparatively few Middle Byzantine churches in Constantinople have survived intact. Better-preserved examples of the central-plan domed churches that were popular in the Byzantine world survive in Greece to the southwest and Ukraine to the northeast, and are reflected in Venice within the western medieval world. These structures document the Byzantine taste for a multiplicity of geometric forms, for verticality, and for rich decorative effects both inside and out.

**APSE MOSAIC OF HAGIA SOPHIA** The upper parts of Justinian's church of Hagia Sophia was originally encrusted with broad expanses of gold mosaic framed by strips of vegetal and geometric ornament, but figural mosaics highlighting sacred individuals or

**8–16 • VIRGIN AND CHILD IN THE APSE OF HAGIA SOPHIA**
Constantinople (Istanbul). Dedicated in 867. Mosaic.

sacred stories seem not to have been part of the original design. With the restitution of images at the end of iconoclasm, however, there was an urgency to assert the significance of images within Byzantine churches, and the great imperial church of the capital was an important location to proclaim the orthodoxy of icons. By 867, mosaicists had inserted an iconic rendering of the Incarnation in the form of an image of the Virgin Mary holding the child Jesus in her lap (FIG. 8–16), flanked by angels, and accompanied by an inscription claiming that "the images which the imposters [the iconoclast emperors] had cast down here, pious emperors have set up again." The design of Hagia Sophia—especially the disposition of the sanctuary apse perforated from top to bottom with bands of windows—provided no obvious areas to highlight a figural mosaic, and working at the extreme height of the halfdome—where the mosaic is located—required the erection of immense wooden scaffolding to accommodate the artists at work (see FIG. 8–4, where the Virgin and Child appear at the top of the central lower apse, floating above the middle of the five windows at the bottom of the halfdome). Adding this mosaic was an expensive project.

Floating on an expansive sweep of gold mosaic with neither natural nor architectural setting—like a monumental icon presented for the perpetual veneration of the faithful—the Virgin and Child in Hagia Sophia recalls the pre-iconoclastic rendering on a surviving icon from Mount Sinai (see FIG. 8–14), but their gracefully modeled faces, their elegantly attenuated bodily proportions, and the jewel-studded bench that serves as their throne, proclaim the singular importance of their placement in Constantinople's principal imperial church. Co-emperors Michael III and Basil I were present in Hagia Sophia on March 29, 867, when the patriarch Photios preached the sermon at the dedication of the apse mosaics, laying claim to the historic moment this represented and challenging the rulers to maintain the orthodoxy it represented.

**MONASTERY OF HOSIOS LOUKAS** Although an outpost, Greece was part of the Byzantine Empire, and the eleventh-century Katholikon (main church) of the monastery of Hosios Loukas, built a few miles from the village of Stiris in central Greece, is an excellent example of Middle Byzantine architecture (FIG. 8–17). It stands next to the earlier church of the Theotokos (Virgin Mary) within the courtyard of the walled enclosure that contained the life of the monks (FIG. 8–18). They slept in individual rooms—called "cells"—incorporated into the walls around the periphery of the complex, and they ate their meals together in a long rectangular hall, parallel to the main church.

The Katholikon has a compact central plan with a dome, supported on squinches, rising over an octagonal core (see "Pendentives and Squinches," page 238). On the exterior, the rising forms of apses, walls, and roofs disguise the vaulting roofs of the interior. The Greek builders created a polychromed decorative effect on the exterior, alternating stones with bricks set both vertically and horizontally and using diagonally set bricks to form saw-toothed moldings. Inside the churches, the high central space carries the eyes of worshipers upward into the main dome, which soars above a ring of tall arched openings.

Unlike Hagia Sophia, with its clear, sweeping geometric forms, the Katholikon has a complex variety of architectural shapes and spaces, including domes, groin vaults, barrel vaults, pendentives, and squinches, all built on a relatively small scale (**FIG. 8–19**). The barrel vaults and tall sanctuary apse with flanking rooms further complicate the spatial composition. Single, double, and triple windows create intricate and unusual patterns of light that illuminated a mosaic of Christ Pantokrator (now lost) looming at the center of the main dome. A mosaic of the Lamb of God surrounded by the Twelve Apostles at Pentecost fills the secondary, sanctuary dome, and the apse halfdome presents a rendering of the Virgin and Child Enthroned, reminiscent of the ninth-century mosaic in the apse halfdome of Hagia Sophia (see FIG. 8–16). Scenes of Christ's life on

earth (the Nativity appears on the squinch visible in FIG. 8–19) and figures of saints fill the upper surfaces of the interior with brilliant color and dramatic images. As at Hagia Sophia, the lower walls are faced with a multicolored stone veneer. A screen with icons separates the congregation from the sanctuary.

**CATHEDRAL OF SANTA SOPHIA IN KIEV** During the ninth century, the rulers of Kievan Rus—Ukraine, Belarus, and Russia—adopted Orthodox Christianity and Byzantine culture. These lands had been settled by eastern Slavs in the fifth and sixth centuries, but later were ruled by Scandinavian Vikings who had sailed down the rivers from the Baltic to the Black Sea. In Constantinople, the Byzantine emperor hired the Vikings as his

Monastery of Hosios Loukas. Early 11th century and later.

The subjects of the mosaics in Middle Byzantine churches such as the Katholikon at Hosios Loukas were organized into three levels according to meaning. Heavenly subjects like Christ Pantokrator, the Virgin Mary, Pentecost (Acts 2:1–3), or angels, appear on the tops of domes or in apse halfdomes. Below them, in a middle register are scenes from Christ's life on earth—here the Nativity in a squinch. Below, at the lowest level of mosaics are iconic representations of saints, closer to the viewer and thus more available for individual prayerful veneration.

personal bodyguards, and Viking traders established a headquarters in the upper Volga region and in the city of Kiev, which became the capital of the area under their control.

The first Christian member of the Kievan ruling family was Princess Olga (c. 890–969), who was baptized in Constantinople by the patriarch himself, with the Byzantine emperor as her godfather. Her grandson Grand Prince Vladimir (r. 980–1015) established Orthodox Christianity as the state religion in 988 and cemented his relations with the Byzantines by accepting baptism and marrying Anna, the sister of the powerful Emperor Basil II (r. 976–1025).

Vladimir's son Grand Prince Yaroslav (r. 1036–1054) founded the **CATHEDRAL OF SANTA SOPHIA** in Kiev (FIG. 8–20). The church—originally designed as a typical Byzantine multiple-domed cross—was expanded with double side aisles, leading to

five apses, and incorporating a large central dome surrounded by 12 smaller domes, all of which creates a complicated and compartmentalized interior. The central domed space of the crossing, however, focuses attention on the nave and the main apse, where the walls glow with lavish decoration, including the mosaics of the central dome, the apse, and the arches of the crossing. The remaining surfaces are frescoed with scenes from the lives of Christ, the Virgin, the apostles Peter and Paul, and the archangels.

The Kievan mosaics established a standard iconographic system used in Russian Orthodox churches. A Christ Pantokrator fills the curving surface at the crest of the main dome (not visible above the window-pierced drum in FIG. 8–20). At a lower level, the apostles stand between the windows of the drum, with the four evangelists occupying the pendentives. An orant figure of the Virgin Mary seems to float in a golden heaven on the halfdome

other spread to clutch a massive book securely. In the squinches of the corner piers are four signal episodes from his life: Annunciation, Nativity, Baptism, and Transfiguration.

A mosaic of the **CRUCIFIXION** from the lower part of the church (**FIG. 8–22**) exemplifies the focus on emotional appeal to individuals that appears in late eleventh-century Byzantine art. The figures inhabit an otherworldly space, a golden universe anchored to the material world by a few flowers, which suggest the promise of new life. A nearly nude Jesus is shown with bowed head and gently sagging body, his eyes closed in death. The witnesses have been reduced to two isolated mourning figures, Mary and the young apostle John, to whom Jesus had just entrusted the care of his mother. The elegant cut of the contours and the eloquent restraint of the gestures only intensify the emotional power of the image. The nobility and suffering of these figures was meant to move monks and visiting worshipers toward a deeper involvement with their own meditations.

This depiction of the Crucifixion has symbolic as well as emotional power. The mound of rocks and the skull at the bottom of the cross represent Golgotha, the "place of the skull," the hill outside ancient Jerusalem where Adam was thought to be buried and where the Crucifixion was said to have taken place. The faithful saw Jesus Christ as the new Adam, whose sacrifice on the cross saved humanity from the sins brought into the world by Adam and

**8–20 • INTERIOR, CATHEDRAL OF SANTA SOPHIA, KIEV**
1037–1046. Apse mosaics: Orant Virgin and Communion of the Apostles.

and upper wall of the apse, and on the wall below her is the Communion of the Apostles. Christ appears not once, but twice, in this scene, offering the Eucharistic bread and wine to the apostles, six on each side of the altar. With such extravagant use of costly mosaic, Prince Yaroslav made a powerful political declaration of his own power and wealth—and that of the Kievan Church as well.

**MONASTERY CHURCH OF THE DORMITION AT DAPHNI**
The refined mosaicists who worked c. 1100 at the monastery church of the Dormition at Daphni, near Athens, seem to have conceived their compositions in relation to an intellectual ideal. They eliminated all "unnecessary" detail to focus on the essential elements of a narrative scene, conveying its mood and message in a moving but elegant style. The main dome of this church has retained its riveting image of the Pantokrator, centered at the crest of the dome like a seal of divine sanction and surveillance (**FIG. 8–21**). This imposing figure manages to be elegant and awesome at the same time. Christ blesses or addresses the assembled congregation with one hand, while the slender, attenuated fingers of the

**8–21 • CHRIST PANTOKRATOR WITH SCENES FROM THE LIFE OF CHRIST**

Eve. The arc of blood and water springing from Jesus' side refers to Eucharistic and baptismal rites. As Paul wrote in his First Letter to the Corinthians: "For just as in Adam all die, so too in Christ shall all be brought to life" (1 Corinthians 15:22). The timelessness and simplicity of this image were meant to aid the Christian worshiper seeking to achieve a mystical union with the divine through prayer and meditation, both intellectually and emotionally.

**MONASTERY CHURCH OF ST. PANTELEIMON AT NEREZI** Dedicated in 1164, the church of St. Panteleimon—the Katholikon of the small monastery at Nerezi in Macedonia—was built under the patronage of Alexios Komnenos, nephew of Emperor John II (r. 1118–1143). Here the wall paintings were created in fresco rather than mosaic, with a stylistic delicacy and **painterly** spontaneity characteristic of Byzantine art under the Komnenians. It represents well the growing emphasis in capturing the emotionalism of sacred narrative, already noted at Daphni. In the upper part of one wall, the scene of the **LAMENTATION** over the dead body of Christ (**FIG. 8–23**)—a non-biblical episode that seems to have been developed during the twelfth century—forges a direct link with viewers' emotions, while standing in the register below, a group of monastic saints model the unswerving postures of spiritual stability. The narrative emphasis is on the Virgin's anguish as she cradles the lifeless body of her son in the broad extension of her lap, pulling his head toward her, cheek to cheek, in a desperate final embrace. Behind her, St. John bends

**8-23 • LAMENTATION WITH STANDING MONASTIC SAINTS BELOW**

to lift Jesus' hand to his cheek, conforming to a progressively descending diagonal arrangement of mourners that tumbles from the mountainous backdrop toward resolution in the limp torso of the savior. Such emotional expressions of human grief in human terms will be taken up again in Italy by Giotto over a century later (see FIG. 18–8).

**THE CATHEDRAL OF ST. MARK IN VENICE** The northeastern Italian city of Venice, set on the Adriatic at the crossroads of Europe and Asia Minor, was in certain ways an outpost of Byzantine art in Italy. Venice had been subject to Byzantine rule in the sixth and seventh centuries, and up to the tenth century, the city's ruler, the doge ("duke" in Venetian dialect), had to be ratified by the Byzantine emperor. At the end of the tenth century, Constantinople granted Venice a special trade status that allowed its merchants to control much of the commerce between east and west, and the city grew enormously wealthy.

Venetian architects looked to Byzantine domed churches for inspiration in 1063, when the doge commissioned a church to replace the palace chapel that had housed the relics of St. Mark the apostle since they had been brought to Venice from Alexandria in 828/29 (**FIG. 8–24**). The Cathedral of St. Mark is designed as a Greek cross, with arms of equal length. A dome covers each square unit—five great domes in all, separated by barrel vaults and supported by pendentives. Unlike Hagia Sophia in Constantinople, where the space seems to flow from the narthex up into the dome and through the nave to the apse, St. Mark's domed compartments produce a complex space in which each dome maintains its own separate vertical axis. As we have seen elsewhere, marble veneer covers the lower walls, and golden mosaics glimmer above on the vaults, pendentives, and domes. A view of the exterior of St. Mark's as it would have appeared in early modern times can be seen in a painting by the fifteenth-century Venetian artist Gentile Bellini (see FIG. 20–42).

**8–24 • INTERIOR (A) AND PLAN (B) OF THE CATHEDRAL OF ST. MARK**
Venice. Begun 1063. View looking toward apse.

This church is the third one built on the site. It was both the palace chapel of the doge and the burial place for the bones of the patron of Venice, St. Mark. The church was consecrated as a cathedral in 1807. The mosaics have been reworked continually to the present day.

## PRECIOUS OBJECTS OF COMMEMORATION, VENERATION, AND DEVOTION

As in the Early Byzantine period, tenth-, eleventh-, and twelfth-century artists produced small, often portable, luxury items for wealthy members of the imperial court as well as for Church dignitaries. These patrons often commissioned such precious objects as official gifts for one another. They had to be portable, sturdy, and refined, representing the latest trends in style and subject. These works frequently combined exceptional beauty and technical virtuosity with religious meaning; many were icons or devotional objects. Ivory carving, gold and **enamel** work, fine books, and intricate panel paintings were especially prized.

**IVORIES** Standing slightly over 9 inches tall, the small ivory ensemble known as the **HARBAVILLE TRIPTYCH** (named after a nineteenth-century owner) was made as a portable devotional object with two hinged wings that could be folded shut for travel. Its privileged owner used this work as the focus for private prayer; as a luxury object it also signaled high status and wealth. When opened (**FIG. 8-25A**), the triptych features across the top of the central panel a tableau with an enthroned Christ flanked by Mary and St. John the Baptist. This is a composition known as the "Deësis" (meaning "entreaty" in Greek), which shows Mary and John interceding with Christ, presumably pleading for forgiveness and salvation for the owner of this work. St. Peter stands directly under Christ, gesturing upward toward him, and flanked by four other apostles—SS. James, John, Paul, and Andrew, all identified by inscriptions. The figures in the outer panels (both back and front) are military saints, bishop saints, and martyrs.

These holy figures stand in undefined spatial settings, given definition only by the small bases under their feet, effectively removing their gently modeled forms from the physical world. As a whole, they represent a celestial court of saints attending the enthroned Christ in paradise, categorized into thematic groups in an organization that recalls the ordered distribution of subjects in a Middle Byzantine church (see FIGS. 8–19, 8–20). On the back of the central panel (**FIG. 8-25B**) is a symbolic evocation of paradise itself in the form of a large stable cross surrounded by luxurious vegetation inhabited by animals, presumably an evocation of the longed-for destination of the original owner, a reminder to focus attention on devotional practice and enlist the aid of the congregation of saints to assure the attainment of salvation. An abbreviated inscription above the cross—IC XC NIKA—backs up the pictorial reminder with words—"Jesus Christ is victorious."

**8–25 • FRONT (A) AND BACK (B) OF THE HARBAVILLE TRIPTYCH**
From Constantinople. Mid 10th century. Ivory, closed 9½″ × 5⅝″ (24.2 × 14.3 cm); open 9½″ × 11″ (24.2 × 28 cm). Musée du Louvre, Paris.

Related to the Harbaville Triptych in both figure style and compositional format is an independent ivory panel portraying an emperor and empress gesturing toward and standing between an elevated figure of Christ, who reaches out to touch the crowns they wear on their heads (**FIG. 8-26**). The imperial figures are identified by inscription as Romanos and Eudokia—most likely Emperor Romanos II, son and co-emperor of Constantine VII

**8-26 • CHRIST CROWNING EMPEROR ROMANOS II AND EMPRESS EUDOKIA**
From Constantinople. 945–949. Ivory, 7⅜″ × 3¾″ (18.6 × 9.5 cm). Cabinet des Médailles, Bibliothèque Nationale de France, Paris.

Porphyrogenitos (r. 945–959), and Romanos's first wife Eudokia, the daughter of Hugo of Provence, King of Rome, whom Romanos married in 944 when she was only 4 years old, and who died in 949. This is not a scene of coronation but an emblem—Eudokia, for instance, is represented as an adult rather than as a child—of the fusion of imperial authority with the religious faith that sanctioned and supported it. The carefully modeled figure of Christ, whose drapery is arranged to give three-dimensionality to his bodily form, offers a striking contrast to the stiff and flattened figures of the imperial couple, all but consumed by the elaborate decoration of their royal robes.

**MANUSCRIPTS** Painted books were some of the most impressive products of the Middle Byzantine period, and of the Macedonian Renaissance in particular. The luxurious Paris **Psalter** (named after its current library location) is a noteworthy example.

This personal devotional book—meant to guide the prayer life of its aristocratic owner—includes the complete text of the Psalms and a series of odes or canticles drawn from the Bible that were a standard part of Byzantine psalters. The annotation of the biblical texts with passages from interpretive commentaries gives this book a scholarly dimension consistent with a revival of learning that took place under the Macedonians emperors. Indeed it seems to have been commissioned in Constantinople by the intellectual Emperor Constantine VII Porphyrogenitos as a gift for his son Romanos II, whom we have already encountered (see FIG. 8–26).

This book is best known, however, neither for its learned texts nor for its imperial patron or owner, but for its set of 14 full-page miniatures. The fresh spontaneity of these paintings and the complicated abstraction underlying their compositional structure—salient stylistic features of the Macedonian Renaissance—make this book one of the true glories of Byzantine art. Eight of these framed miniatures portray episodes from the life of Israel's King David, who as a boy had saved the people of God by killing the giant Goliath

**8-27 • DAVID COMPOSING THE PSALMS**
Page from the Paris Psalter. Constantinople. c. 950. Paint and gold on vellum, sheet size 14½″ × 10½″ (37 × 26.5 cm). Bibliothèque Nationale de France, Paris.

**Made in Constantinople. 12th century. Silver-gilt on wood, cloisonné enamels, gemstones. 18⅛″ × 13¾″ (46 × 35 cm).**
Treasury of the Cathedral of St. Mark, Venice.

This bust portrait of Christ, created with **cloisonné** enamel, appears directly over the head of St. Michael, sanctioning his power with a gesture of blessing or recognition. The medallions on the upper corners portray SS. Peter and Menas, but the enamels once filling comparable medallions on the lower strip of the frame are lost.

Heavily abbreviated inscriptions flanking or surmounting the saints identify them by name.

In 1834, restorers replaced the wings of St. Michael, which are now probably disproportionately large in relation to the originals. In the same restoration, the precious gemstones once set into the frame were replaced with colored glass.

Four pairs of military saints in oval compartments flank St. Michael on the lateral strips of the frame. This entourage emphasizes the military character of St. Michael himself, who is dressed and equipped for battle as the leader of a heavenly army.

Luminous enamel (glass heated to the melting point at which it bonds to the underlying or surrounding metal) completely covers the face of St. Michael to give it the appearance of human flesh.

Lavish and intricate patterns created from enamel fill the background around St. Michael. Byzantine artists were virtuosos in the *cloisonné* technique, in which gold strips or wires are soldered to the underlying metal surface to separate the different colors of enamel from each other, forming a network of delicate gold lines that delineate the decorative forms and enliven the surface with reflected light.

A series of separately fabricated forms—nimbed head, torso, legs, arms, wings, sword, and fully three-dimensional orb and sword—have been assembled to create the projecting figure of St. Michael.

(see FIG. 8–1) and who was traditionally considered the author of the Psalms. The first of these depicts David seated outdoors against a background of lush foliage while he composes the Psalms to the accompaniment of his harp (**FIG. 8–27**). Groups of animals surround him in the foreground, while his native city of Bethlehem looms through the atmospheric mist in the background.

The Macedonian Renaissance emphasis on a Classical revival is evident here in the personification of abstract ideas and landscape features: Melody, a languorous female figure, leans casually on David's shoulder to inspire his compositions, while another woman, perhaps Echo, peeks from behind a column in the right background. The swarthy reclining youth in the lower foreground is a personification of Mount Bethlehem, as we learn from his inscription. The motif of the dog watching over the sheep and goats while his master strums the harp invokes the Classical subject of Orpheus charming wild animals with music. The strongly modeled three-dimensionality of the forms, the integration of the figures into a three-dimensional space, and the use of atmospheric perspective all enhance the Classical flavor of the painting, in yet another example of the enduring vitality of pagan artistic traditions at the Christian court in Constantinople.

**ICONS** In the centuries after the end of iconoclasm, one of the major preoccupations of Byzantine artists was the creation of independent devotional images in a variety of media. The revered twelfth-century icon of Mary and Jesus known as the **VIRGIN**

intimate, is a representation of the archangel Michael in silver-gilt and enamel (see "A Closer Look," page 257), whose technical virtuosity and sumptuous media suggest it may have been an imperial commission for use within the palace complex itself. St. Michael is dressed here as a confrontational military commander in the heavenly forces, a real contrast with the calmly classicizing angelic form he takes in the large ivory panel we examined from the Early Byzantine period (see FIG. 8–12). This later St. Michael did not remain in Constantinople. It is now in the treasury of the Cathedral of St. Mark in Venice, one of many precious objects taken as booty by Latin crusaders in 1204 at the fall of Constantinople during the ill-conceived Fourth Crusade. This devastating event brought an abrupt end to the Middle Byzantine period.
## LATE BYZANTINE ART

A third great age of Byzantine art began in 1261, after the Byzantines expelled the Christian crusaders who had occupied Constantinople for nearly 60 years. Although the empire had been weakened and its domain decreased to small areas of the Balkans and Greece, the arts underwent a resurgence known as the Palaeologue Renaissance after the new dynasty of emperors who regained Constantinople. The patronage of emperors, wealthy courtiers, and the Church stimulated renewed church building as well as the production of icons, books, and precious objects.

### CONSTANTINOPLE: THE CHORA CHURCH

In Constantinople, many existing churches were renovated, redecorated, and expanded during the Palaeologue Renaissance. Among these is the church of the monastery of Christ in Chora. The expansion of this church was one of several projects that Theodore Metochites (1270–1332), a humanist poet and scientist, and the administrator of the imperial treasury at Constantinople, sponsored between c. 1315 and 1321. He added a two-story annex on the north side, two narthexes on the west, and a parekklesion (side chapel) used as a funerary chapel on the south (FIG. 8–29). These structures contain the most impressive interior decorations remaining in Constantinople from the Late Byzantine period, rivaling in splendor and technical sophistication the works of the age of Justinian, but on a more intimate scale. The walls and vaults of the parekklesion are covered with frescos (see "The Funerary Chapel of Theodore Metochites," page 260), and the narthex vaults are encrusted with mosaics.

In the new narthexes of the Chora church, above an expanse of traditional marble revetment on the lower walls, mosaics cover every surface—the domical groin vaults, the wall lunettes, even the undersides of arches—with narrative scenes and their ornamental framework (FIG. 8–30). The small-scale figures of these mosaics seem to dance with relentless enthusiasm through the narrative episodes they enact from the lives of Christ and his mother. Unlike the stripped-down narrative scenes of Daphni (see FIG. 8–22), here the artists have lavished special attention on the

**OF VLADIMIR** (FIG. 8–28) was probably painted in Constantinople but brought to Kiev. This distinctively humanized image is another example of the growing desire for a more immediate and personal religion that we have already seen in the Crucifixion mosaic at Daphni, dating slightly earlier. Here the artist used an established iconographic type, known as the "Virgin of Compassion," showing Mary and the Christ Child pressing their cheeks together and gazing at each other with tender affection, that is found as early as the tenth century and was believed to have been first painted by St. Luke, reproducing what he had seen in a vision. The *Virgin of Vladimir* was thought to protect the people of the city where it resided. It arrived in Kiev sometime in the 1130s, was subsequently taken to the city of Suzdal, and finally to Vladimir in 1155. In 1480, it was moved to the Cathedral of the Dormition in the Moscow Kremlin.

Also from the twelfth century, but made from more precious materials and presenting a saintly image more hieratic than

settings, composing their stories against backdrops of architectural fantasies and stylized plants. The architecture of the background is presented in an innovative system of perspective, charting its three-dimensionality not in relation to a point of convergence in the background—as will be the case in the linear, **one-point perspective** of fifteenth-century Florentine art (see "Renaissance Perspective," page 610)—but projecting forward in relationship to a point in the foreground, thereby drawing attention to the figural scenes themselves.

The Chora mosaics build on the growing Byzantine interest in the expression of emotions within religious narrative, but they broach a level of human tenderness that surpasses anything we have seen in Byzantine art thus far. The artists invite viewers to see the participants in these venerable sacred stories as human beings just like themselves, only wealthier and holier. For example, an entire narrative field in one vault is devoted to a scene where the infant Mary is cuddled between her adoring parents, Joachim and Anna (**FIG. 8–33**; part of the scene is visible in **FIG.** 8–30). Servants on either side of the family look on with gestures and expressions of admiration and approval, perhaps modeling the response that is expected from viewers within the narthex itself. The human interaction even extends to details, such as the nuzzling of Mary's head into the beard of her father as she leans back to look into his eyes, and her tentative reach toward her mother's face at the same time. In another scene, the young Jesus rides on the shoulders of Joseph, in a pose still familiar to fathers and children in our own time. The informality and believability that these anecdotal details bring to sacred narrative recalls developments as far away as Italy, where at this same time Giotto and Duccio were using similar devices to bring their stories to life (see Chapter 18).

Theodore Metochites (1270–1332) was one of the most fascinating personalities of the Late Byzantine world. Son of a disgraced intellectual cleric—condemned and exiled for championing the union of the Roman and Byzantine Churches—Metochites became a powerful intellectual figure in Constantinople. As a poet, philosopher, and astronomer who wrote scores of complicated commentaries in an intentionally cultivated, arcane, and mannered literary style, he ridiculed a rival for his prose style of "excess clarity." In 1290, Emperor Andronicus II Palaeologus (r. 1282–1328) called Metochites to court service, where the prolific young scholar became an influential senior statesman, ascending to the highest levels of the government and amassing power and wealth second only to that of the emperor himself. Metochites' political and financial status plummeted when the emperor was overthrown by his grandson in 1328. Stripped of his wealth and sent into exile, Metochites was allowed to return to the capital two years later, retiring to house arrest at the Chora monastery, where he died and was buried in 1332.

It is his association with this monastery that has become Theodore Metochites' greatest claim to enduring fame. Beginning in about 1315, at the peak of his power and wealth, he funded an expansion and restoration of the church of Christ in Chora (meaning "in the country"), part of an influential monastery on the outskirts of Constantinople. The mosaic decoration he commissioned for the church's expansive narthexes (see FIGS. 8–30, 8–33) may be the most sumptuous product of his beneficence, but the project probably revolved around a **FUNERARY CHAPEL** (or parekklesion) that he built adjacent to the main church (**FIG. 8–32**), with the intention of creating a location for his own funeral and tomb.

The extensive and highly integrative program of frescos covering every square inch of the walls and vaults of this jewel-box space focuses on funerary themes and expectations of salvation and its rewards. Above a dado of imitation marble stand a frieze of 34 military saints ready to fulfill their roles as protectors of those buried in the chapel. Above them, on the side walls of the main space, are stories from the Hebrew Bible interpreted as prefigurations of the Virgin Mary's intercessory powers. A portrayal of Jacob's ladder (Genesis 28:11–19), for example, evokes her position between heaven and earth as a bridge from death to life. In the pendentives of the dome over the main space (two of which are seen in the foreground) sit famous Byzantine hymn writers, with quotations from their work. These carefully chosen passages highlight texts associated with funerals, including one that refers to the story of Jacob's ladder.

The climax of the decorative program, however, is the powerful rendering of the **ANASTASIS** that occupies the halfdome of the apse (**FIG. 8–31**). In this popular Byzantine representation of the Resurrection—drawn not from the Bible but from the apocryphal Gospel of Nicodemus—Jesus demonstrates his powers of salvation by descending into limbo after his death on the cross to save his righteous Hebrew forebears from Satan's grasp. Here a boldly striding Christ—brilliantly outfitted in a pure white that makes him shine to prominence within the fresco program—lunges to rescue Adam and Eve from their tombs, pulling them upward with such force that they seem to float airborne under the spell of his power. Satan lies tied into a helpless bundle at his feet, and patriarchs, kings, and prophets to either side look on in admiration, perhaps waiting for their own turn to be rescued. During a funeral in this chapel, the head of the deceased would have been directed toward this engrossing tableau, closed eyes facing upward toward a painting of the Last Judgment, strategically positioned on the vault over the bier. In 1332, this was the location of Metochites' own dead body since this parekklesion was indeed the site of his funeral. He may have been buried in one of the niche tombs cut into the walls of the chapel, or even within a tomb that was placed under the floor of the sanctuary itself, directly under the painted image of the archangel Michael, guardian of souls.

## ICONS

Late Byzantine artists of Constantinople created icons as well as painting murals and making mosaics on walls. Among the most dynamic and engaging is a representation of the Annunciation on one side of an early fourteenth-century double-sided icon (**FIG. 8–34**)—the other side has an image of the Virgin and Child—roughly contemporary with the redecoration of the Chora church. This icon was made in the capital, perhaps under imperial patronage, and sent from there to the archbishop of Ohrid. Over three feet tall, it was probably mounted on a pole and carried in processions, where both sides would be visible. Characteristic of Constantinopolitan art under the Palaeologues are the small heads of the figures, their inflated bodies, and the light-shot silk of their clothing; the forward projecting perspective of the architecture of background and throne, similar in concept to what we have seen in the Chora mosaics (see FIG. 8–33); as well as the fanciful caryatids perched on the tops of the columns.

The practice of venerating icons intensified in Russia during this period; regional schools of icon painting flourished, fostering the work of remarkable artists. One of these was the renowned artist-monk Andrey Rublyov who created a magnificent icon of **THE HOSPITALITY OF ABRAHAM** sometime between about 1410 and 1425 (**FIG. 8–35**). It was commissioned in honor of Abbot Sergius of the Trinity-Sergius Monastery, near Moscow. The theme is the Trinity, represented here by three identical angels. Rublyov's source for this idea was a story in the Hebrew Bible of the patriarch Abraham and his wife Sarah, who entertained three strangers who were in fact God represented by three divine beings in human form (Genesis 18). Tiny images of Abraham and Sarah's home and

**8–34 • ANNUNCIATION TO THE VIRGIN**
Sent from Constantinople to the church of the Virgin Peribleptos, Ohrid, Macedonia. Early 14th century. Tempera on panel, 36⅝″ × 26¾″ (93 × 68 cm). Icon Gallery, Ohrid, Macedonia.

the oak of Mamre can be seen above the angels. The food the couple offered to the strangers becomes a chalice on an altarlike table.

Rublyov's icon clearly illustrates how Late Byzantine artists—like the artists of ancient Greece—relied on mathematical conventions to create ideal figures, giving their works remarkable consistency. But unlike the Greeks, who based their formulas on close observation of nature, Byzantine artists invented an ideal geometry to evoke a spiritual realm and conformed their representations of human forms and features to it. Here the circle forms the basic underlying structure for the composition. Despite this formulaic approach, talented artists like Rublyov worked within it to create a personal, expressive style. Rublyov relied on typical Late Byzantine conventions—salient contours, small heads and long bodies, and a focus on a limited number of figures—to capture the sense of the spiritual in his work, yet he distinguished his art by imbuing it with a sweet, poetic ambience.

The Byzantine tradition continued for centuries in the art of the Eastern Orthodox Church and is carried on to this day in Greek and Russian icon painting. But in Constantinople, Byzantine art—like the empire itself—came to an end in 1453. When the forces of the Ottoman sultan Mehmed II overran the capital, the Eastern Empire became part of the Islamic world. The Turkish conquerors were so impressed with the splendor of the Byzantine art and architecture in the capital, however, that they adopted its traditions and melded them with their own rich aesthetic heritage into a new, and now Islamic, artistic efflorescence.

## THINK ABOUT IT

**8.1** Characterize the role of the Classical tradition, already notable in the Early Christian period, in the developing history of Byzantine art. When was it used? In what sorts of contexts? Develop your discussion in relation to two specific examples from two different periods of Byzantine art.

**8.2** Compare the portrayals of the Byzantine rulers in the mosaics of San Vitale in Ravenna (see FIGS. 8–8, 8–9) and those on a tenth-century ivory plaque (see FIG. 8–26). Attend to the subjects of the scenes themselves as well as the way the emperor and empress are incorporated within them.

**8.3** How were images used in Byzantine worship? Why were images suppressed during iconoclasm?

**8.4** How do the mosaics of the Chora church in Constantinople emphasize the human dimensions of sacred stories? Consider, in particular, how the figures are represented, what kinds of stories are told, and in what way.
## CROSSCURRENTS

FIG. 7–13A

FIG. 8–3A

Both of these grand churches were built under the patronage of powerful rulers and were meant to glorify them as well as serve the Christian community. What features do they share? In what ways are they fundamentally different? What functions did they serve in both Church and state?
